

EUCALYPTUS CAMALDULENSIS

River Red Gum

Botanical name

Common name

DESCRIPTION

Typical height:
15-20 metres

Typical width:
15-20 metres

Growth rate:
Moderate

Typical form:
Broad domed

CHARACTERISTICS

- Medium to large evergreen tree.
- Greyish trunk with cream, red, or dark-grey patches.

TOLERANCES

- High tolerance of periodic waterlogging

ORIGIN

Mainland Australia (seven subspecies), typically along inland rivers and floodplains. Indigenous to Hobsons Bay.

FACTS AND TRIVIA

The most widespread eucalypt in Australia and the most commonly planted eucalypt outside of Australia.

Easily distinguished from eastern Red Gums (e.g. *E. tereticornis*, *E. blakelyi*) by the very pinched, beaked bud cap.
